## facility analysis survey (fas)

### WHAT IS THE FAS?

The Facility Analysis Survey, conducted by an experienced Lee Tennis staff member, includes the gathering and documentation of historical site data, geotechnical information, court orientation, computer generated 3-dimensional topographical surface maps (shown below), surface thickness and base stone measurements, analysis of the irrigation systems, court drainage, curbing, tennis court lighting, nets, net posts, fencing, and other court and player amenities.

The Facility Analysis Survey reports on the information gathered in an easy to read and understand format. The full-color, bound report focuses on existing site findings, short and long-term recommendations by including photographs, computer generated drawings, and informative charts.

### WHO IS THE FAS FOR?

The FAS was developed for tennis court builders, court owners, the career teaching professional, court maintenance personnel, club managers, long-range planning committees, and the Board of Directors at private clubs, parks & recreation departments, home owners associates, hotels and resorts.

### WHY IS THE FAS REQUESTED?

- For construction and maintenance guidance prior to facility renovations or new construction.
- To evaluate existing court conditions and offer improvements to court maintenance.
- To identify capital improvement needs for long-term planning and budgeting.
- To investigate the possibility of converting hard courts to Har-Tru.

### HOW DO YOU SCHEDULE A FAS?

- Call Lee Tennis at 1-877-4-HAR-TRU or contact your local Har-Tru distributor.
