

INTRODUCING

CLAYTECH

Lee Tennis, sole U.S. distributor of ClayTech, a FieldTurf Tarkett product.

ClayTech Positioning Statement

ClayTech. The next best thing to a HarTru clay court. ClayTech is the perfect answer for those stuck between a HarTru and a hard court. An ideal solution when updating your hard courts, ClayTech's unique clay "sliding" surface delivers all the health benefits of a HarTru clay court with the playability and ease of simple maintenance similar to that of a hard court. Backed by over 80 years of experience by the same professionals that bring you HarTru, ClayTech delivers a superior playing experience that allows all ages at all levels to play for life.

More tennis courts are being converted to clay court systems than ever before in the history of tennis. That's because clay court tennis brings players more enjoyment and fewer injuries at every stage of life. Clay courts allow tennis players to slide, which means they can play for as long and as often as they like without overstressing the knees, back and lower extremities.

Now there's a new clay court surface that blends the sliding feature of clay with the easier, more cost-effective maintenance feature of a hard court – ClayTech® clay courts.

CLAYTECH

ClayTech®

The Best of Clay and Hard Courts, Rolled Into One

ClayTech Court vs. Hard Court

CLAYTECH COURT

Reduces injuries

Reduces severity of injuries

Slides reduce the stress of court impact

Allows frequent play

Playable in all weather

Easy, cost-efficient maintenance

Can be laid over any existing tennis court
(even damaged) with minimum preparation

HARD

85% more injuries than clay

Repeated, excessive impact
exacerbates injury

More stress on back, knees, and ankles

Body needs recovery time

Not playable in all weather

Easy, cost-efficient maintenance

Break down, load, haul away existing
court, start from scratch

ClayTech's natural, clay top layer and synthetic, polypropylene membrane creates an attractive, uniform, sliding court surface. Maintenance requires nothing more than a simple sweep, even after a season of not seeing play. Water consumption is considerably reduced because ClayTech facilitates water absorption and drainage. The clay-topped surface prevents holes and cracks and the polypropylene membrane contributes to a very long life. And since the perimeter lines are painted in place when the surface is installed, the lines easily last for two or three years.
